

As the leader in secondary containment in western Canada and in business for over 15 years, Contain Enviro Services Ltd. has been involved in a wide variety of challenging projects. As such, we have been required to supply Geomembrane lining solutions into a wide spectrum of demanding applications. From heated bitumen tanks, caustic acids or liquid fertilizer for the agricultural industry, Contain Enviro has successfully installed Geomembrane liners and corrugated steel berms into projects both large and small.

No one single Geomembrane liner material exists which is suitable for all applications. With access to the complete range of Geomembrane materials, Contain Enviro Services Ltd. will suggest the most cost-effective liner material while still meeting the environmental and safety requirements of your project.

- *HDPE*
- *LLDPE*
- *PVC*
